DETAILED ACTION

Applicant's arguments, see Remarks filed June 6, 2007 with respect to claim 1 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Kato (JP 2001-255426) and Yamamoto et al.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Kato et al. (JP 2001-255426). Kato discloses a lower clad layer (2); a core layer provided on the lower clad layer (5); an upper clad layer provided on and surrounding the core layer (6); a stress moderating layer provided in at least one portion between the upper clad layer and the lower clad layer for moderating stress caused by shrinkage of the upper clad layer when formed (10).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/797,053

Art Unit: 2883

Claims 2-3, 5-8, 10, 13-16, 21, and 25 rejected under 35 U.S.C. 103(a) as being unpatentable over Kato in view of Yamamoto. Kato discloses the invention of claim 1, however Kato does not explicitly discloses the material and experimental data pertinent to the modulus of the various layers. Yamamoto discloses a waveguide having a stress-relieving layer comprises of an organic-inorganic composite such as an organic polymer and metal alkoxide (Abstract and col. 5, lines 60-64). Please see the Tables 1-4 for comparative examples of the various experimented properties of the embodiments. It would have been obvious to one having ordinary skill in the art to recognize the material disclosed by Yamamoto for producing a polymeric waveguide would be applicable to modify method of placing the stress relieving buffer layer between the upper clad and lower clad, as taught by Kato. The motivation for using the inorganic-organic polymeric composition as disclosed by Yamamoto would manufacture economical waveguide for transmitting mid range, short range, and wide band transmission application (col. 3, lines 1-55).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Erin D. Chiem whose telephone number is (571) 272-3102. The examiner can normally be reached on Monday - Thursday 9AM - 5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank G. Font can be reached on (571) 272-2415. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
